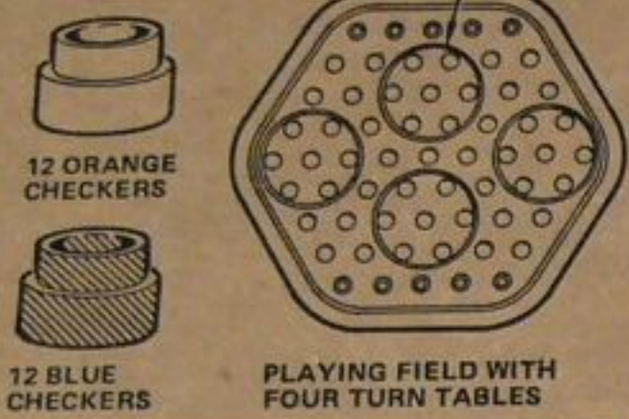
TURN TABLES CHECKERS

TURN THE TABLES™ CHECKERS

INSTRUCTIONS

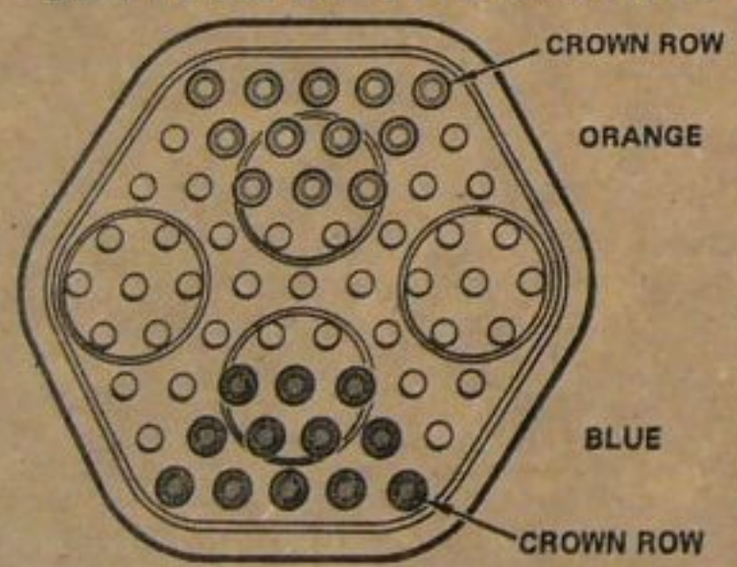
CONTENTS:



OBJECT OF THE GAME:

To capture all your opponent's checkers—the same as in regular checkers—by skill, strategy, and with the help of the special 'turntables.'

SETTING UP THE BOARD:



Players will choose a color—there are 12 of each. Blue Player places 5 of his blue checkers in the crown row on his side of board—the rest as shown. Orange does the same.

THE PLAY:

MOVE AS IN REGULAR CHECKERS

Blue goes first, moving one checker forward, diagonally only—into one of the nearest empty spaces as in regular checkers.

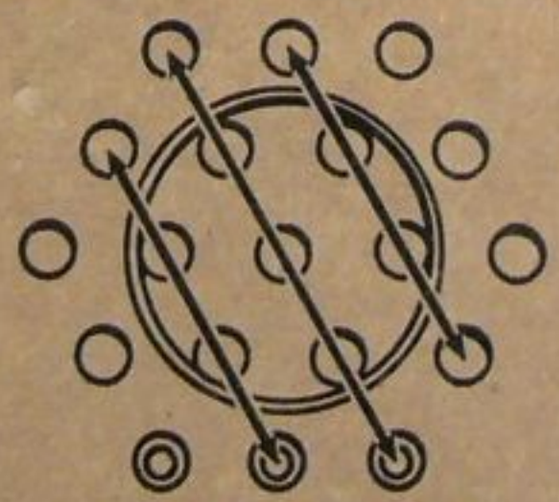
Then orange player takes his turn from his side of board, in the same way. Single checkers (non-kings) can move forward only. Turntables need not be used and players can move their checkers across the turntables as though they are a normal part of the board.

USE OF THE TURNTABLES

The turntables may help you advance or retreat faster than through normal moves and they may help you to suddenly attack or escape from your opponent's pieces.

If you choose to use the turntables you may rotate the turntable as far around as you want on your turn, provided you have at least one of your checkers on that turntable. This constitutes your turn.

NOTE: After rotating a turntable make sure that all the spaces line up correctly, in one of the six places.



You can only turn a turntable if you have a checker on it and your opponent *can not* rotate the same turntable on the very next turn. There must be a delay of one turn before the same turntable is moved again.

JUMPING

Jumping is as in regular checkers and you must jump if in the position to do so. If your opponent does not realize he was in a position to jump, you can take his checker (on your turn) for not jumping. You then also get to take your normal turn.

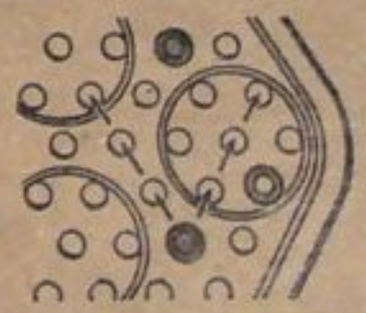
Once a checker has reached the crown row on the opposite side of the board, a checker of the same color is placed on top and it becomes a King (as in regular checkers). Kings may move forward or backward—but remember, always DIAGONALLY, never sideways or straight ahead. Kings may be captured by any opponent's checker or King.

THE WINNER:

Play continues in alternate moves until one player has captured all his opponent's checkers—becoming King of the board—and the winner!

RULES TO REMEMBER:

1. Checkers can move forward DIAGONALLY *only!*



2. Kings may move forward or backward—DIAGONALLY *only!*
