Othellito

18 dbl
sided

Components

Othellito is a strategy game for two players played on an invisible and floating 4x4 grid. There are eighteen identical pieces (or cards) which are light on one side and dark on the other.

Winning the game

The object of the game is to have the majority of pieces turned to display your color when the game ends.

Setup

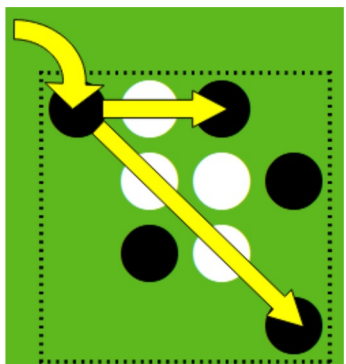
Place four pieces in the center of the playing area in a checkerboad arrangement. Put the remaining pieces in a shared draw pile. Choose a starting player.

Gameplay

Players take turns, placing pieces of their color on the board.

All pieces of the opponent's color that are in a straight line between the piece just played and another piece of that color (vertically, horizontally or diagonally) are turned to match the played piece.

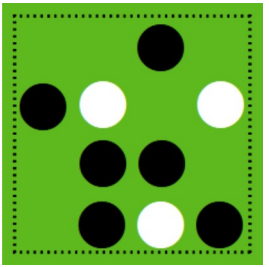
Every turn **must flip at least one opponent piece** to be a legal play. If no legal plays are possible, the game ends.



The grid

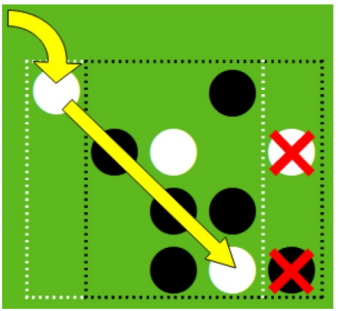
The 4x4 invisible, floating grid is formed by the pieces placed and will shift during play.

You may only place a piece that starts a fifth row or column if you are able to clear the opposite row or column from the board.



Clearing a row or column

If you place a piece creating a fifth row or column, you must remove the opposite row or column; however, you may not remove a row or column containing more pieces than you just flipped. If you cannot do so, the play is illegal.



Game ending

The game ends when a player cannot place a piece that flips any pieces to their color.

Winning

The player whose pieces make up the majority of the board wins.

It is possible to have a tie game.
