

Kamisado

Object of the game: To reach your opponent's "home row" with one of your colored dragon towers. Achieving this in the Single Round (Base Game) wins the game. When playing match games, your tower gets promoted to a "Sumo" dragon tower and is worth one point to its owner. In later rounds the "Sumo" can become a "Double" worth 3 points or "Triple Sumo" worth 7 points. A "Triple Sumo" that gets promoted again scores 15 total points.

The game is offered in the following matchups:

Single Round (Base Game): where the first player to score 1 point is the winner.

Standard Match: where the first player to score a total of 3 points is the winner.

Long Match: where the first player to score a total of 7 points is the winner.

Marathon Match: where the first player to score a total of 15 points is the winner.

1. Setup:

Each player places each tower on their "home row", matching the tower's color to their specific square color.

2. Playing the game

During each round, the players take turns moving a dragon tower, each attempting to be the first to place a dragon tower on a square within their opponent's "home row" (rear row). The dragon towers are moved according to these 2 rules:

Rule 1: For the first move only in any round, the player can select any of their eight dragon towers to move.

Rule 2: For all subsequent moves in that round, each player must move the dragon tower that matches the color of the square on which their opponent's previous piece has been placed. IE: Player one moves his yellow tower to a purple square. Player two must then move their purple tower to a valid square.

3. Valid Movement:

Rule 1: Towers must be moved in a straight line, vertically or diagonally forwards. Sideway or backward moves are NEVER allowed (except backward moves made as a result of a "Sumo push").

Rule 2: Towers can be moved any number of squares, but may not pass through any square that already contains a tower (player or opponent).

Rule 3: A tower can only move to an empty square (two towers can't occupy the same space).

Rule 4: A tower can move diagonally between two towers which touch corner-to-corner.

Rule 5: A tower must be moved at least one square, assuming that it is possible to do so.

Rule 6: If unable to move the required tower in any direction forward that player loses their turn, allowing their opponent to immediately move again.

Rule 7: The round ends once a player moves a tower to any square within their opponent's "home row".

Rule 8: In rare circumstances, there are occasions where players can find themselves in "deadlock situations". These circumstances occur when both players have towers which are completely blocked and are unable to be moved OR have two towers that repeat moves indefinitely. In either of these situations, the player who made that final move (creating this occurrence) is considered to have lost the round.

4. Continued Setup for Match Play:

If playing more than one round, players do not immediately reset the board. The order of the "home row" will be partially determined by the finished order of the pieces from the previous game. The initial order, in which they are placed, is determined by the winner of the previous round-choosing to fill from the left or from the right.

Kamisado

4. Continued Setup for Match Play (Continued):

- Rules governing filling from left or right :

Rule 1: The player who won the previous round (the “Defender”) chooses in which direction to fill.

Rule 2: The player who lost the previous round (the “Challenger”) must fill in the same way.

Rule 3: If filling from the left, fill from brown to orange square; filling from the right, orange to brown square.

Rule 4: Using the final order of the towers, from the previous game, you begin filling your “home row”. The piece that is closest to “home row” and nearest to the corner the “Defender” selected is placed into this corner space. The next order of pieces are also determined by row first, then the column that is closest to the corner space selected. IE: You choose left to right (start on brown) and your closest two towers are on row 2, one on blue and the other on orange. The one on blue is first since it’s closest to the brown corner starting space.

5. Movement as “Sumo” dragon towers:

When a round ends, the piece that landed on their opponents “home row” receives one of the clear plastic “Dragon’s Teeth” for the top of that tower. Now referred to as a “Sumo” piece, it possesses the ability of the “Sumo Push” with the following qualities according to the number of “teeth” it holds:

- 1 “Dragon’s Teeth”:

Movement is limited to a maximum of 5 spaces

Can push a regular tower

Landing on the “home row” gains you 3 points, and a second “Dragon Teeth”.

- 2 “Dragon’s Teeth”:

Movement is limited to a maximum of 3 spaces

Can push up to 2 towers at once (up to any combination of “Sumo” or regular tower pieces- 2 total)

Landing on the “home row” gains you 7 points, and a third “Dragon Teeth”

- 3 “Dragon’s Teeth”:

Movement is now limited to 1 space

Can push up to 3 towers at once (any combination of “Double Sumo”, “Sumo” or regular pieces- 3 total)

Landing on the “home row” gains you 15 points.

Specific Rules Regarding the “Sumo Push”:

1. The opponent’s tower must be on the square immediately in front of the Sumo tower
 2. The opponent had to end their previous move on a square color that matches the color of the Sumo tower
 3. You only push the opponents piece(s) backwards one space in a vertical direction (never diagonally)
 4. A “Sumo Push” is an option that the player is not obliged to use, assuming there are alternative diagonally forward moves (which bypass the piece) which could be pushed.
 5. Immediately after the Sumo push, the opponent loses their turn, and the original player (making the Sumo push) moves again using the dragon tower whose color matches the square which the opponents piece was pushed onto. IE: if you pushed your opponents pieces backwards onto the red square, move your red tower.
 6. There must be an empty square behind the pushed piece (for this piece to be pushed onto) since the color of this square determines what color tower will be moved next.
 7. “Sumo’s” cannot push a piece if it’s on their opponents home row (cannot push a piece off the board).
 8. A player can only perform a “Sumo Push” on their opponent’s pieces (never their own pieces).
-

Initial Setup

1. One player plays as gold/white, the other as black. **Choose your color.** Traditionally, the more experienced player takes gold/white and goes first.
2. Place **each piece on the same-color space** in your *home row* (back row).
3. Agree which type of match you are playing:

<u>Match Type</u>	<u>Points Required to Win</u>
Single Round	1
Standard	3
Long	7
Marathon	15

Movement Rules

- Your pieces can only move in a straight line forward, either orthogonally or diagonally, through unobstructed spaces into an empty space.
- Your sumo pieces can push lower-level enemy pieces straight ahead 1 space (see below), instead of making an unobstructed movement.
 - Your sumo is limited to the number of pieces it can push at once (see below).
 - There must be an empty space behind the column of pieces your sumo is pushing.
 - After you sumo-push my pieces, my piece that got pushed closest to my home row is considered to have moved to its new space, my turn is skipped, and it is your turn again.
- The space on which your piece lands dictates the color of piece I must move next.
- If you are required to move a piece that cannot move, it is considered to have moved to its current space again, your turn is skipped, and it is my turn again. If I, too, am unable to move my piece, the player who last actually moved a piece loses the round, and the other player promotes the piece of the color of space on which that last move landed.

<u>Piece Type</u>	<u>Maximum Move Distance</u>	<u>Number of Pieces It Can Sumo-Push 1 Space Straight Ahead</u>
Normal	7	0
Sumo	5	1
Double-Sumo	3	2
Triple-Sumo	1	3

Play

On your turn, you must move a piece (Rule M5).

1. The starting player chooses any one of her pieces to move (Rule T1) according to the **Movement Rules** above.
2. Now the other player must move the piece whose color matches the space upon which his opponent's piece landed (Rule T2).
3. Repeat from Step 2 until someone moves a piece onto her opponent's home row, winning the round (Rule M7). See **Winning the Round** below.

Winning the Round

1. Promote the piece you moved into your opponent's home row: Normal → Sumo → Double-Sumo → Triple-Sumo
2. Each piece is worth a certain number of points (see below). Total each player's score to see if the game is over. If not, continue to the next step.

<u>Piece Type</u>	<u>Point Value</u>
Normal	0
Sumo	1
Double-Sumo	3
Triple-Sumo	7

Note: Getting a Triple-Sumo to your opponent's home row earns you an **8-point bonus**, for an instant win of even a Marathon Match!

3. Choose whether to refill your home row toward the right or toward the left (Rule F1); after you do the following steps, your opponent will have to do the same (Rule F2). The following steps assume you chose "left"; if you chose "right", just do the mirror-image of these steps (Rules F3, F4):
 - a. In your home row, move the leftmost piece into the leftmost space; the second-leftmost goes into the second-leftmost space, and so on.
 - b. From the next row, move your leftmost piece into the leftmost empty space in your home row; repeat until the row is empty.
 - c. Repeat step b until your home row is full.
4. The loser of this round starts the next round.

Note: Your pieces probably are not all on their original spaces.

End of the Game

Once someone has earned the points required to win for the type of match you are playing, that player has won the game.
