

Prometheus

2022, Christopher Curtis, <https://boardgamegeek.com/boardgame/355960>

The game is played on an 8x8 board,

Each player has eight *cubes*, eight *tetras* (pyramids with square bases) and eight *pyras* (pyramids with triangular bases). There is also a royal piece, the *sphere*.

Setup. Each player places their cubes in the first row, tetras in the second row, and pyras in the third row. Then, they replace one of the cubes or tetras with their own sphere.

The pieces move as many squares as they have corners:

- Pyras move up to four squares
- Tetras move up to five squares
- Cubes move eight squares
- Spheres do not move

The movement is over empty squares (no diagonal moves, no jumps) except the last square that can have an opponent piece (which gets captured).

Goal. The player that captures the opponent's sphere wins the game.
