

Chaos

2007, Mindware Publ., <https://boardgamegeek.com/boardgame/32004/chaos>

The game is played on a 3x3 board initially empty,

each player has twelve stones

Take turns placing one of your stones, either on an empty space or on top of another of your own or opponent's stones.

As soon as a tower of four is formed, it explodes and its four stones are placed onto the four orthogonally adjacent spaces in the following order: the topmost stone (that you just placed) lands on the space opposite the active player, the other stones are then placed in a clockwise direction.

If a stone lands on an occupied space, it is placed on top of that stone. If it lands outside the board, it goes back into the supply. If there is a tower of three next to the exploding tower, which then becomes a tower of four, it also explodes and so on.

Goal. The winner is the first person to have all of their stones on the board at the same time.
