Bocch

2026, Kairo, www.bocchgame.com

The game is played on a 6x6 board, with six stones for each player

initial setup; the numbers indicate the number of neighbors

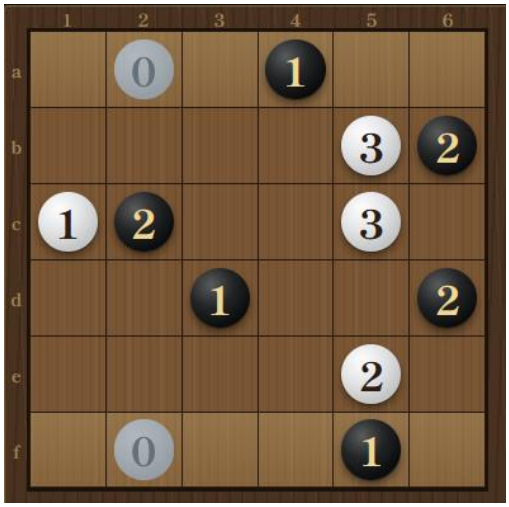

Pick one of your stones and move it in a straight line, orthogonally or diagonally.

- The distance is exactly the number of stones (either color) in the eight squares around it before it moves. Five or more neighbors count as four. A stone with no neighbors (a “loner”) can't move.

Stones can be jumped over. You can't land on an occupied square. Stones are never captured.

Goal. If, after your move, two or more of your stones are on the far row (your opponent's edge row), you win. Stones in the far row may still move.

- If you have no legal move, you lose. The same position three times is a draw.

Black to move and wins in 2

(d6-d4 and then d4-a1)
