Rivolto

2026, Alessandro Rizzi, https://boardgamegeek.com/boardgame/481024

The game is played on a 5x5 grid, with the central square unused:

initially, randomly place the 12 white and 12 black markers among the 24 squares

There is also a common pool of 24 double-sided black/white discs

Players alternate placing one large disc on an empty square.

The player chooses which side of the disc faces upwards. It does not have to match their own assigned color. The color of the square underneath determines what happens:

- If the disc color matches square color, flip all other large discs in the same row and column.
- Otherwise, flip all other large discs on both diagonals passing through that square.

The newly placed disc is not flipped by this operation.

Goal. When all 24 large discs have been placed, count the visible colours. The player with more disks of his color wins the game (ties are possible).
