

Radiolarians

2026, Corey Clark, <https://boardgamegeek.com/thread/3667927>

Definitions

- **Husk:** a single isolated stone is a *husk*.
- **Radiolarian:** a *radiolarian* is a maximal set of stones that can be reached through 1+ steps between like-colored stones. A husk is not a *radiolarian*

The player, on his turn, must do one of the following moves:

- Enter a new 1x2 *radiolarian* (not adjacent to any friendly stones)
- Move one friendly *radiolarians* and add a stone to it without capturing (contacting an enemy group via the placement)
- Move a *radiolarian* to capture an enemy group (no stone is added)
- Add a stone to a friendly *radiolarian* without moving, in which case the player may capture by growing

Moving: Each one of your *radiolarians* represents a mini-map of where it can move. Simply choose some stone comprising the radiolarian and choose another stone that has exactly 1 stone adjacent to it. These are respectively called the *atrium* and *extremity*. You may now move the entire *radiolarian* while maintaining its shape, by moving the atrium to where the extremity WAS, provided you do not move over any other *radiolarian* of either color or land on top of any stones. You may freely move over husks of any color.

Capturing: there are two ways to capture enemy stones: moving, and growing while remaining stationary. In either case you contact an enemy *radiolarian* removing the entire thing except for one of the furthest stones (by number of steps from the site of capture) which remains on the board as a *husk*.

Self-capture: you may make a move that ends with you contacting one or more friendly *radiolarians*. In this case remove the inactive *radiolarian* leaving behind one of the furthest stones as a *husk*. If you contact one or more friendly husks by moving or growing, the radiolarian being moved or grown dies, once again by leaving one of its furthest stones from each point of contact as a *husk*.

Goal. The objective of Radiolarians is to be the last player standing. If at any point during your turn, the only pieces you have on the board are husks, you lose.
