

Temple

2026, Simon Allmer, <https://boardgamegeek.com/boardgame/424137/temple>

Each player's nine stones are placed in the triangle surrounding their own Artemis field

White moves first. Players alternate turns.

Each stone has two options:

- Move the stone to an unoccupied adjacent field by following the path. A stone can only move forwards or sideways — never backwards.
- Leap over an adjacent stone to land on an unoccupied field beyond it. If you leap over an *opponent's* stone, that stone is removed. If you leap over a stone of your *own* color, nothing happens to it.
 - You may leap over more than one stone in a single turn, provided you always land on an unoccupied field in between.
 - The direction may change by up to 45° after each landing.
 - Stones cannot leap over two or more stones standing next to each other.
 - *Leap of Faith*: A leap may also carry a stone outside the Temple entirely — that stone is then removed from the game.

Goal. The first player to place a stone on the opposing Artemis field wins. If a threefold repetition occurs, the game ends in a draw.
