Wenn die Schafe aus der Reihe tanzen...

SET-UP OF THE GAME

The two sheep of your color initially sit in one corner of the board. Over the course of the game, you will exchange your sheep for two neutral sheep.

OBJECT OF THE GAME

Your objective is to arrange your shepherd and three sheep in one row, orthogonally (horizontally or vertically) or diagonally. The first player to manage this three times wins the game.

COURSE OF THE GAME

Players alternate turns. On your turn, you move **either your own shepherd or any one of the sheep** in the playing area. The only figure you are not allowed to move is your opponent's shepherd.

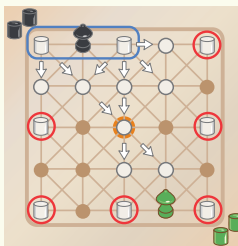

The following movement rules apply:

- Principally, shepherds and sheep may move any number of steps orthogonally or diagonally, **as long as the path is clear**. You may not jump over other figures or relocate them, and you are not allowed to change directions **during a move**. In doing so, you need to observe:
 - You may always move your own shepherd (*see illus. 2b*).
 - You may move a sheep only if it has direct visual contact with your shepherd (*see illus. 2a*), that means, if your shepherd and the sheep are standing in one line (orthogonally or diagonally) and the visual contact is not interrupted by another figure. You may leave one or more hollows empty between the shepherd and the sheep.
- The direct visual contact applies to the **starting situation** of your turn. Once you are moving a sheep, you may put it on a space where it is then no longer seen by your shepherd.
- If you choose a sheep that the other player has just moved on the previous turn, you may move it in any direction, but not place it back into the same hollow from where it started (*see illus. 3 a and illus. 3b*).
- You may not voluntarily skip your turn. If you are not able to move, i.e., you can move neither a sheep nor your shepherd, you lose the game.

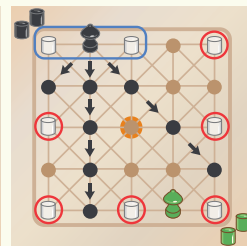

Example of a starting move for Black:

The player may move only the figures inside the blue border. All the other sheep have no direct visual contact with the black shepherd. Illustration 2a shows the possible moves of the two sheep.

Illustration 2b shows the black shepherd's moving options.

Illus. 2b

How to form a row:

- A row always consists of at least three sheep and your own shepherd. It can run in an orthogonal or diagonal line, but not across corners. The figures can be in any order, but the **row must not be interrupted by a gap or the other player's shepherd**.
- In a valid row, a shepherd may **not** be **in the center of the playing area** (*see illustration markings in orange*).
- As soon as you have formed a row, a neutral sheep from this row is exchanged with one of your colored sheep. **Your opponent determines which sheep is to be exchanged.**
- Your own colored sheep may **no longer be part of your new rows**. However, they can still move in compliance with the movement rules.
- Attention! Your opponent may use your colored sheep for forming his or her own rows!
- If you move to a position that results in a valid row for your opponent, this counts.
- If you remove your shepherd from a just-formed row and your opponent moves onto the vacant space, this counts as a valid row, provided no sheep of that player's color is part of it.
- If you add your shepherd to a valid row of your opponent, so that the three sheep along with your shepherd also result in forming a valid row, this counts.
- If your shepherd is part of two valid rows at the same time (which are on two different lines), both rows count, and a colored sheep is exchanged in both of them. If you have already formed your own row before that, you win immediately (*see illus. 4b*).

END OF THE GAME

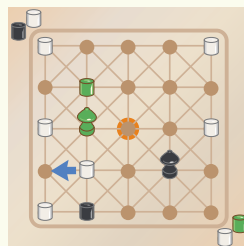

Players keep playing until the first of them forms his or her third valid row. This person wins, and the game ends.

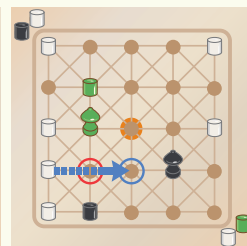

Example of a move backward:

Green moves the white sheep to the left (see illus. 3a) in order to form a row on the next turn.

Black moves the same sheep back but may not place it where it was before. Instead, he moves it two spaces to the right in order to prepare his own row (see illus. 3b).

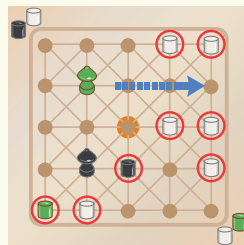

Illus. 3a

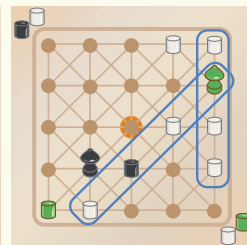

Illus. 3b

Example of two valid rows:

It's Green's turn; she moves her shepherd three steps to the right (see illus. 4a). With this, her shepherd becomes part of two valid rows at the same time (see illus. 4b). Both rows count, and Green wins.

Illus. 4a

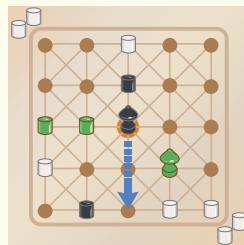

Illus. 4b

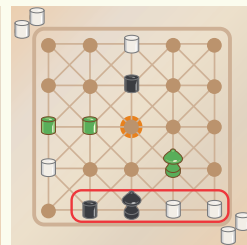

Example of an invalid row:

It's Black's turn. He cannot move a sheep in order to prevent Green from forming a row (see illus. 5a). Black places his shepherd in this row.

The black sheep there makes the row invalid. But as a consequence of this turn, Green cannot form a valid row either (see illus. 5b).

THINKING HARD ABOUT SHEEP

A game by Andreas Kuhnekath-Häbler

WHEN THE SHEEP STEP OUT OF LINE...

GAME MATERIALS

- 14,5 x 14,5 cm oil-treated beechwood gameboard
- 8 neutral sheep (white pegs)
- 2 shepherds (1 green, 1 black)
- 2 x 2 sheep in the shepherds' colors

English translation: Sybille & Bruce Whitehill, "Word for Wort"

MOUTONS DROIT DEVANT

Un jeu de Andreas Kuhnekath-Häbler

QUAND LES MOUTONS FONT LA FÊTE...

MATÉRIEL DE JEU :

- Plateau en hêtre huilé, 14,5 x 14,5 cm
- 8 moutons neutres (blancs)
- 2 bergers (vert et noir)
- 2 moutons de plus dans les couleurs des bergers
