

Rules of the game Up & Across

Aim of the game:

Bring 2 of the 3 wizards to the other side of the board where they end up on one of your own towers.

Set up the game according to the example on the right.

Taking Turns

In your turn, you may choose from the following actions:

- Move towers OR,
- Moving Wizards.

Moving Towers:

If you move towers, you ALWAYS move 2 of them. One tower moves all the steps in a straight line, the other tower moves all the steps in a diagonal line. The order in which you do this is up to you. Towers MUST take a number of steps, depending on the size of the tower.

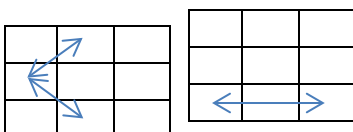

- The smallest tower 1 step
- The middle tower 2 steps
- The largest tower 3 steps

Moving Wizards:

By moving wizards, you can move 3 steps. You can divide them as you like. If you move wizards, they must always move one step up or one step down. You may move several steps up or down. Moving from the smallest to the largest tower (and vice versa) is always two steps and is only possible if the middle one is used.

In General

- You may walk with your wizards on the opponent's towers and end up on them. (in your turn, not as a winning condition)
- You may not pass a tower if there is a wizard on it.
- You only get a score if your wizard is on your tower on the opponent's starting line.
- If you move towers, you can step over other towers, if there is another tower at the place where your turn ends, you cannot make the move.
- If you collide with the edge, the tower continues in the opposite direction to where it came from. In most cases according to the pattern below.
