

Crozzit

2016, Fausto van Houwelingen, <https://boardgamegeek.com/boardgame/207853>
Also known as *Track*, *Pathways*.

Each player starts with 30 1x2, one 1x3 and 1x4 tiles. The board is 18x18 and starts initially empty.

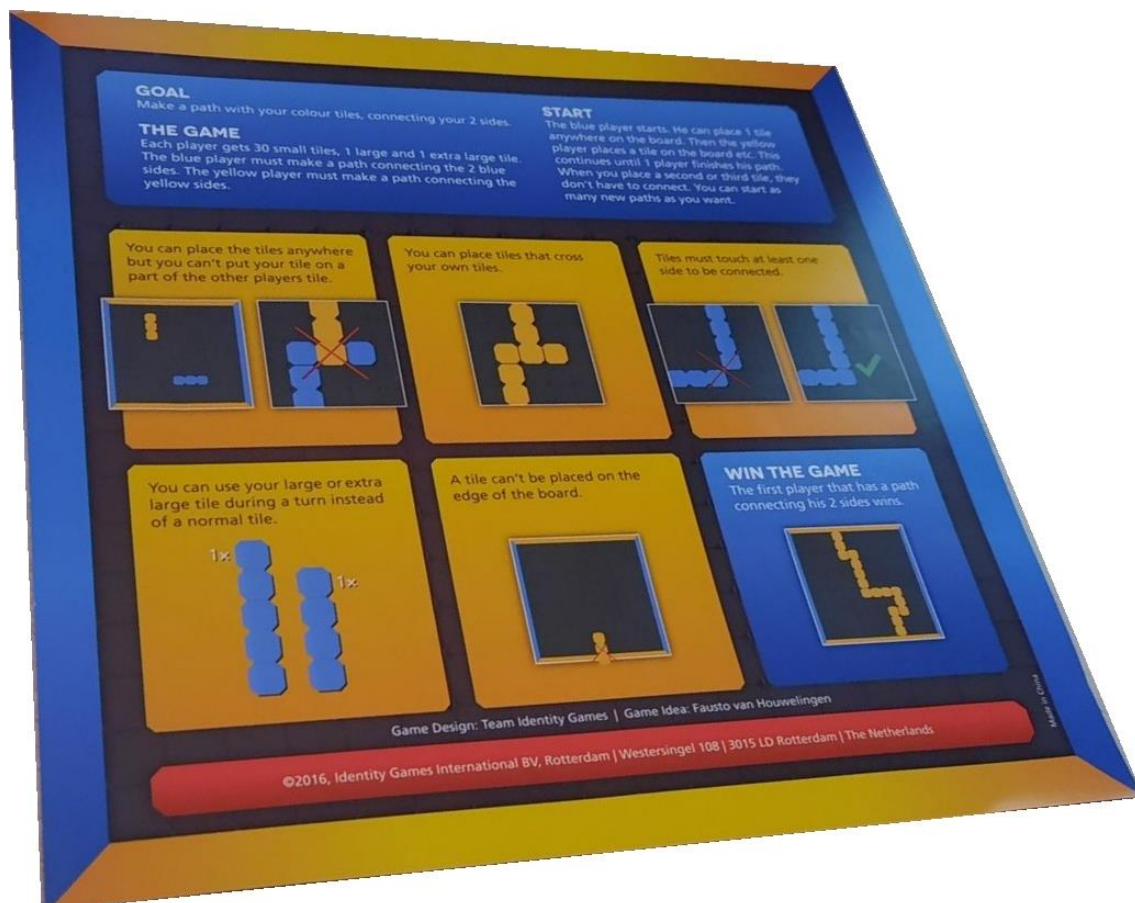

On his turn, the player drops a friendly tile completely inside the board over empty squares, or by making bridges over empty or friendly tiles.

- It is illegal to place tiles over adversary tiles.

Goal. The player that connects his two opposite sides, with an orthogonal path of friendly tiles, wins the game.

It seems the game has a serious design problem: it is possible to create a blocking position, where each player occupies a diagonal on a 2x2 area. This is a well-known problem that square connection games must approach and solve. With the current rules, as far as I can tell, Crozzit allows these blocking patterns, so most matches between competent players will be inconclusive.
