

Flip Flop Free

2026, Mitsuo Yamamoto, www.kickstarter.com/projects/logygames/flip-flop-free

The game is played on a 5x5 board,

Black has 13 stones and two flip stones, White has 12 stones and three flip stones

Black starts.

On his turn, the player either:

- drops a friendly stone on an empty cell,
- uses a flip stone on an enemy stone to turn into a friendly stone.

Captures are custodian, flipping all enemy stones in-between (just like Othello).

When all stones are dropped or used, the game ends.

The player with more friendly stones on the board wins the game
