

Domino Effect by: Deryk Rumbold

Introduction: Domino Effect is a two player game played on three 5x5 square boards. Two Players Red and Blue will each have 12 normal pieces and 3 King Pieces that will be broken up into sets of 4 normal pieces and 1 King Piece for each board. Players can choose to play a standard game with all pieces on the home row as in figure 1 or both players can agree alternating placing their pieces into whatever unoccupied space they want as long as a board doesn't exceed 4 normal pieces and 1 King Piece.

Object of the Game:

To eliminate 2 opponent King pieces.

Gameplay:

Phase 1: Players alternate turns in which one person chooses one piece to move one square either horizontally, vertically or diagonally. This first move is considered the **Original Move**. Whatever direction is chosen for the **Original Move** the same direction must be used for a move on any piece on the other two boards. If a move takes your piece off the board then it is removed from the game. To capture enemy pieces you must land exactly on top of them. When a piece is captured, set it off to the side to use for Phase 2.

Phase 2: When all 3 moves are made on each board then you can place any captured pieces next to the board of your choice. Any pieces placed like this will add plus one for each captured piece to whatever the **Original Move** was. (See Figure 2 for example)

Game End: The game ends immediately when one player gets down to one King.
