

Rock, Paper, Four

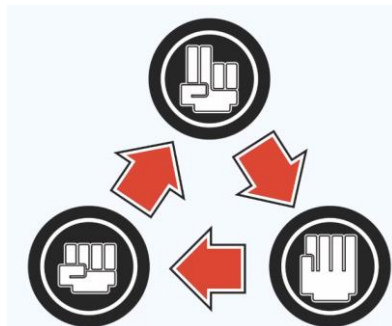

2026, studio JOINTJOINT, <https://studiojointjoint.booth.pm>

The game is played on a 5x5 board,

Each player has four pieces each of three types of tokens (the pieces are bicolored, with the same type on both sides). There is an extra neutral red piece (called "Gu-Choki-Pa").

The three types are the known Rock-Paper-Scissors with their relative strengths:

Initially, place the red piece in the center to start the game. This red piece functions like any of the other hand signs and never loses to any piece (it never flips).

On his turn, the player places a friendly piece on an empty square.

- Once the piece is placed, compare its hand sign with the other pieces within a 1-space radius around it. Flip over all pieces (either Black or White) that have a weaker hand sign.

Goal. There are two ways of winning the game:

- Line up four friendly pieces, either orthogonally or diagonally
- Line up four pieces with the same hand sign in a straight line, either orthogonally or diagonally
 - Both winning patterns can include the red neutral piece.
