

One Up

2008, Garrett J. Donner, Wendy L. Harris, Michael S. Steer,
<https://boardgamegeek.com/boardgame/36645/one-up>

The game is played on the following board:

*initially the 16 pieces are placed on the central 4x4 area,
pieces of the same color cannot be orthogonally adjacent*

Each player has one color. The remaining colors are neutral.

There is an extra black piece that is used to counter how many moves the player can make at the current turn. The counter starts at 1.

Say the black counter is at N. On his turn, the player makes N actions. Each action corresponds to moving any piece to an orthogonally adjacent empty square.

After both players make those N moves, the counter is increased by 1.

Goal. The player that makes an orthogonal or diagonal 4 in-a-row with his pieces wins the game. It is also possible to win by moving his four pieces to the four corners outside the 4x4 central area.
