

Pawn Stop

2017, Ellis Hendriksen, Arvid Klaversteijn,

<https://boardgamegeek.com/boardgame/224087/pawn-stop>

The rules presented are from 2022 version, renamed Colour Collect which, afaict, changes the first move (which improves balancing).

The game is played on a 5x5 board. There is a neutral pawn and there are 25 tokens (five per color) starting on board and randomly placed:

*initially no tokens of the same color must be orthogonally adjacent;
the neutral pawn is placed at the center*

The first player removes the center token and gives it to the second player.

On his turn, the player slides the pawn over a line of empty square into an occupied square, then capturing its token.

Goal. The player that captures three tokens of the same color wins the game.

Note: I could not find what happens if the pawn does not have a token to move to. Should the pawn move to an empty square? Should it be teleported to a token?
