Residuel

Designed by Michael Amundsen

2 players / 25 minutes / 8 years and older

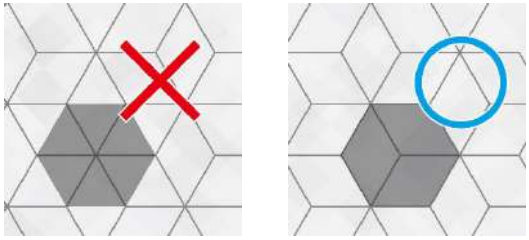

Residuel is a territory game that uses a uniquely shaped board. Players play hexagonal tiles of their own color and compete for the remaining areas where no tiles can be placed. Each area is won by the player with more tiles adjacent to it. Getting a feel for the board's characteristics is important in this game.

COMPONENTS

- A board with the diamond grid
- Hexagonal tiles, 23 each in black and white
- Small discs, 25 each in black and white

GAMEPLAY

First, one player places one black tile on the board so that it exactly covers three diamonds on the grid (same for subsequent turns).

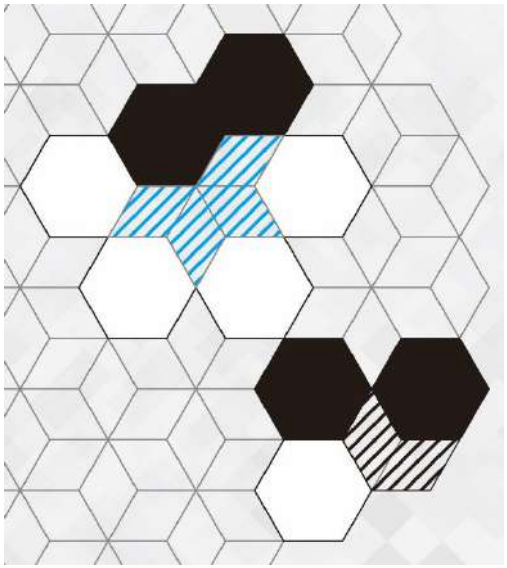

(Fig.1,2) Examples of illegal placement (left) and legal placement (right)

The other player confirms the initial placement and decides whether to play as white or black.

After that, players take turns starting with the white player. On your turn, place one of your tiles on an empty space on the board so that it does not overlap with any other tiles. Passing is not allowed.

If the placement creates closed spaces where no more tiles can be placed inside, count the number of tiles surrounding the space, and the player with more tiles touching the space places a disc of their color in that area.

If the number of tiles touching is the same between players, place the disc of the player who closed the area. Note that it is possible to close multiple areas at once with a single placement.

(Fig.3) The blue hatched area is surrounded by four white tiles and two black tiles, so it is a white area, while the black hatched area is surrounded by two black tiles and one white tile, so it is a black area.

GAME END

The game ends when no more tiles can be placed, and the score is calculated as follows.

・If the last player to place a tile was black (the first player), the white player gets an extra point.

・Players score points from the areas where they placed their discs. The score for each area is equal to the number of diamonds in that area.

The player with the highest total score wins (there can be no ties because the points are distributed oddly)

(Fig.4) White wins by 27–22 (Since it ended with Black's move, 1 point is added to White's score)
