

Instigators

2026, Dale Walton, <https://boardgamegeek.com/thread/3663305>

The game is played on a hexhex board, say of size 4, initially empty,

Definitions

- **Peasants** are single pieces, ie., 1-stacks
- **Instigators** are 2-stacks or higher

On your turn, first place an instigator on an empty space. Then, if available to play, you must choose to play either of the two follow-up options:

Option A: Place an instigator on an empty cell

- a) If placed next to a friendly instigator, move this second instigator one step, capturing any enemy pieces there.
- b) If this second instigator does not capture an enemy instigator and can capture a peasant by taking one more step, it must do so. Otherwise, it stops where it is.
- c) Move the top piece of the instigator you first placed, down to the space left vacant by the second instigator, thus converting it into two peasants.

Note: The moving instigator is limited to two steps

Option B: Add a piece to an adjacent friendly peasant, converting it into an instigator.

Goal. When there are no moves available, the player with most peasants wins. If equal, the player with more instigators wins the game.
