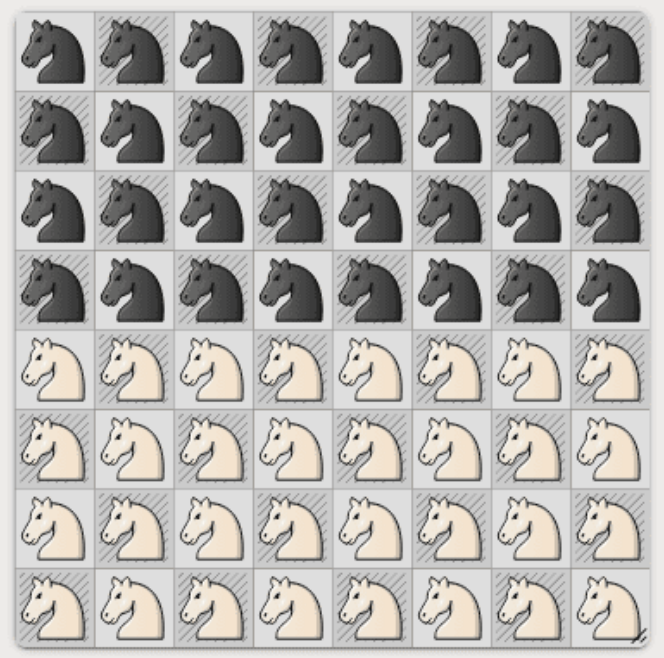
Knight Break

2026, Vadrya Pokshtya, https://boardgamegeek.com/thread/3771962

The game is played on a 8x8 board, with 64 Knights,



initial setup

On your turn, you may play three times. You may play three times with one knight, or with three different knights, or twice with one and once with another, as you like. But all three moves are mandatory.

Capturing works somewhat differently than in chess. When a knight captures an enemy knight, both vanish from the board. The attacker does not triumph on the captured square. It evaporates together with its victim. A one-for-one trade. No material advantage.

You cannot capture your own pieces. You cannot jump onto a square occupied by your own knight.

Goal. Be the first to place any of your knights on the opponent's back rank, and the knight must get there without capturing, meaning it must land on an empty square.

White races to the eighth rank. Black races to the first. Victory is instant, even if it happens on the first of the three moves.

A draw is possible in only one case: if no pieces remain on the board. Neither white nor black. This happens when the last two knights kill each other.
