The Final Harvest

2026, Vadrya Pokshtya, https://boardgamegeek.com/thread/3789951

The game is played on an 8x8 board, using 32 gravestone tiles and two reapers,

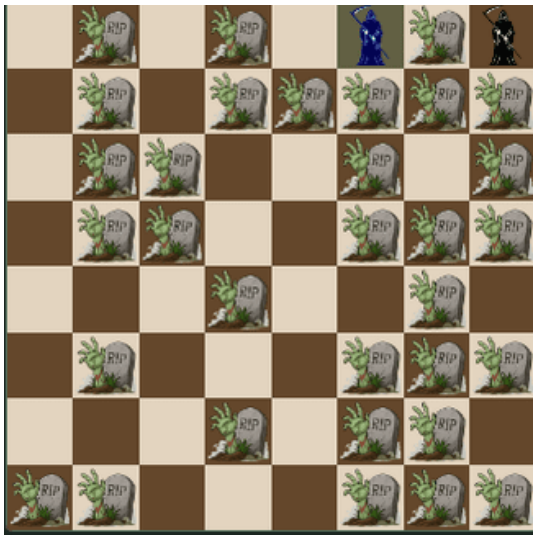

initially, the 32 tiles are randomly placed
the reapers start in reserve

On their first turn, each player drops their reaper on empty squares.

Afterwards, players move their reaper (reapers move like a Chess Queen + Knight) over empty squares landing on an occupied square capturing that piece.

Goal. The player loses the game if he has no legal move, or his reaper is captured.

The first player blundered by dropping his reaper on h8;
the second player replies at f8, winning the game in the next turn
