Vino Square

2026, Ejsoon Yi, https://boardgamegeek.com/boardgame/480882

The game is played on a 10x10 board, initially empty.

Pieces

- **Fino** is a V-pentomino: five squares joined in a V shape.
- **Vino** is a V-tromino: three squares joined in a V shape.
- **Mino** is a monomino: a single square.

Turn structure

Players alternate turns. Each player's game proceeds through four phases in a fixed order: Fino → Mino → Vino → Flight. The program automatically selects the piece type required by the current phase. A player must continue placing that type whenever at least one legal placement remains. The player advances only after every piece of that type has been placed, or after an exhaustive legal-move check proves that no further piece of that type can be placed. A player may not voluntarily skip a phase or return to an earlier phase.

Fino phase. Place one Fino on empty cells. A newly placed Fino may not touch another piece belonging to the same player, orthogonally or diagonally. As long as another legal Fino placement exists, the player must remain in the Fino phase. The Mino phase begins only after all Fino pieces have been placed or no legal Fino placement remains.

On the first move of each round, the first player's Fino must occupy three of the four central cells.

Mino phase. Place one Mino on an empty cell. A newly placed Mino may not touch another piece belonging to the same player, orthogonally or diagonally. As long as another legal Mino placement exists, the player must remain in the Mino phase. The Vino phase begins only after all Mino pieces have been placed or no legal Mino placement remains.

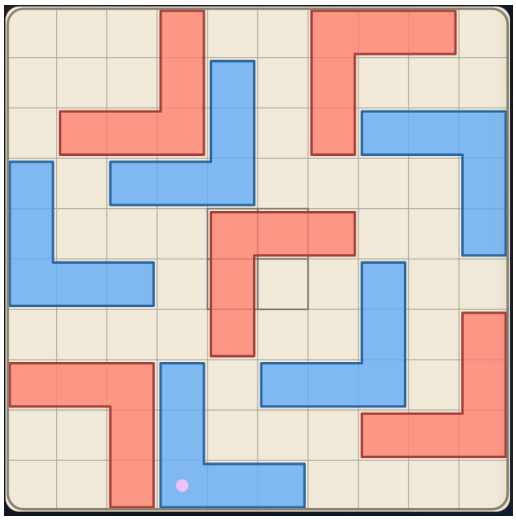

Vino phase. Place one Vino on empty cells. Before placing it, the player may move one of their own Mino pieces in one orthogonal direction. If occupied cells block that direction, the Mino jumps to the nearest empty cell in that direction.

The player must continue placing Vino whenever a legal Vino placement exists, either directly or after any legal normal Mino move. The Flight phase begins only after all Vino pieces have been placed, or after the program proves that no Vino can be placed even after every possible normal Mino move has been considered.

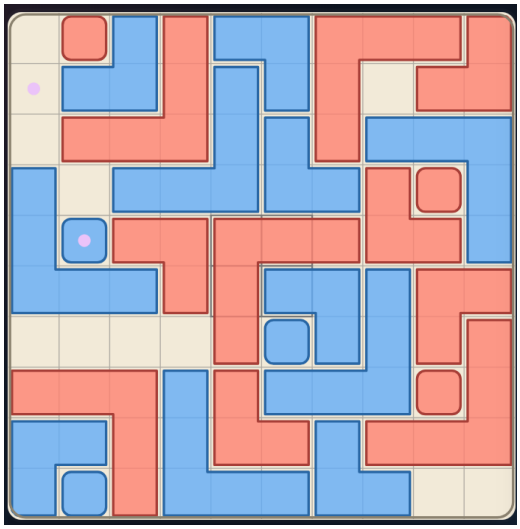

Flight phase. The Flight phase begins automatically; a player may not enter it early. Pick up one of your own Mino pieces and place it — "fly" it — onto an empty cell that it could not reach from its current position by a normal move. Completing this flight ends that player's sequence for the round.

Scoring. Every square region fully occupied by a single player's pieces scores points equal to its area: a 1 × 1 square scores 1 point, a 2 × 2 square scores 4 points, a 3 × 3 square scores 9 points, and so on.

Match result. A match consists of two rounds, with the two players swapping who moves first between rounds. The player with the higher combined score across both rounds wins the match.

after the end of the Fino Phase (25-25)

after the end of the first round (91-67 for Blue)
