

Glissando

2025, Xavier Bultel, <https://bultel.info/Glissando.html>

The game is played on a 8x8 board:

Players take turns. On each turn, the player performs the following two actions in order:

- **Place a piece:** The player places one of their pieces on an empty square of the board. This square must be orthogonally adjacent to a square already occupied by a piece (of either color) or to one of the edges of the board.
- **Slide pieces:** This action is optional. The player may choose one of their pieces already on the board and “slide” it along a line of the board in a chosen direction (up, down, left, or right, but not diagonally). When sliding, the piece moves in the chosen direction across successive empty squares of the line until it encounters an obstacle (either another piece or the edge of the board). If the square adjacent to the piece in the chosen direction is occupied by another piece, it “pushes” that piece. In this case, both pieces slide one after the other along the board until the pushed piece encounters an obstacle. It is also possible to push several pieces, provided they are all aligned and occupy consecutive squares in the chosen direction. In that case, all the pieces slide together until the leading piece encounters an obstacle. Note that it is not possible to stop before reaching an obstacle.

If, at the end of their turn, the player has formed a line of five consecutive pieces of their color (in a row, column, or diagonal), they score one point. In that case, they must remove two of the pieces from that alignment from the board. (The player may only perform this action once per turn, even if multiple alignments of five are formed.)

Goal. The game ends when a player scores their second point. That player wins the game.
