

Portmanteau

2026, Corey Clark, <https://boardgamegeek.com/thread/3755822>

initial setup

Objective: The objective of Portmanteau is to eliminate all your opponent's **stacks**; reduce him to singletons or eliminate him completely.

Starting with Red, turns alternate. On your turn you must either move a **stack** or a **singleton**. A **stack** moves a number of steps (in any combination of the eight directions) **exactly** equal to its height without backtracking (i.e. returning to a space previously moved from on that turn) or moving over occupied space. It must also terminate its movement closer to the opposite corner than it was before the move. Alternatively, you can move a **singleton** backwards (in any of the three directions) a single space. Three different actions may happen apart from basic movement when moving a singleton and no two of these can happen on the same turn.

- **Deploy:** take the top checker off a stack and move it backwards, creating a new singleton
- **Capture:** move a singleton backwards onto an enemy singleton or stack. (Note: Stacks have no ability to capture)
- **Merge:** move a singleton backwards on to a friendly stack (not another singleton)
