

Grador

2026, Kashio Fujii, <https://boardgamegeek.com/boardgame/478261>

initial setup

There are 12 White pieces and 12 Black pieces

Definitions

- **Move count:** The number of times a given piece has moved so far. At the start of the game, every piece's move count is 0.
- **Line:** A straight row of intersecting spaces (cells) running across the board.

On each turn, you must move exactly one piece of your color according to the following rules:

- A piece moves strictly along a single line. It may jump over any number of pieces (both friendly and enemy) in a single move.
- The exact distance (number of spaces) the piece moves must equal that piece's **current move count + 1**.
 - For example, a piece that has never moved (move count 0) moves exactly 1 space. After moving, its move count becomes 1, so its next move must cover exactly 2 spaces.
- A piece cannot move off the board or into an occupied space.
- You win as soon as one of your pieces reaches a move count of 4.
- You lose if you have no legal moves on your turn.
