

Unmergo

2026, Kashio Fujii, <https://boardgamegeek.com/boardgame/480270>

sample position (the board starts empty)

A **group** is a collection of adjacent discs of the same color. A single disc that is not adjacent to any other disc is also considered a group.

On your turn (White starts) perform the following steps:

1. **PLACE A DISC** (Mandatory)

- Place one disc of your color on any empty space, subject to the following restriction:
 - **Restriction:** You may not make a placement that merges two or more of your existing groups into one.
- If you have no legal placements, you must pass, and your turn ends immediately.

2. **MOVE AN OPPONENT'S DISC** (Optional)

- After placing a disc, you may choose one of your opponent's discs on the board and move it to an adjacent empty space.
- This move has no restrictions like placement does; you are free to move an opponent's disc to merge their groups.
- If you choose not to move a disc, or if you had no legal placement in step 1, your turn ends without making this move.

The game ends when neither player has any legal moves left. Upon game end, the player with more groups of their own color wins.

- If the number of groups is tied, list each player's groups from largest to smallest and compare them one by one. At the first point where the sizes differ, the player with the smaller group wins.
