

Halma Climbers

2021, Alexander Brady, <https://boardgamegeek.com/thread/2750218>

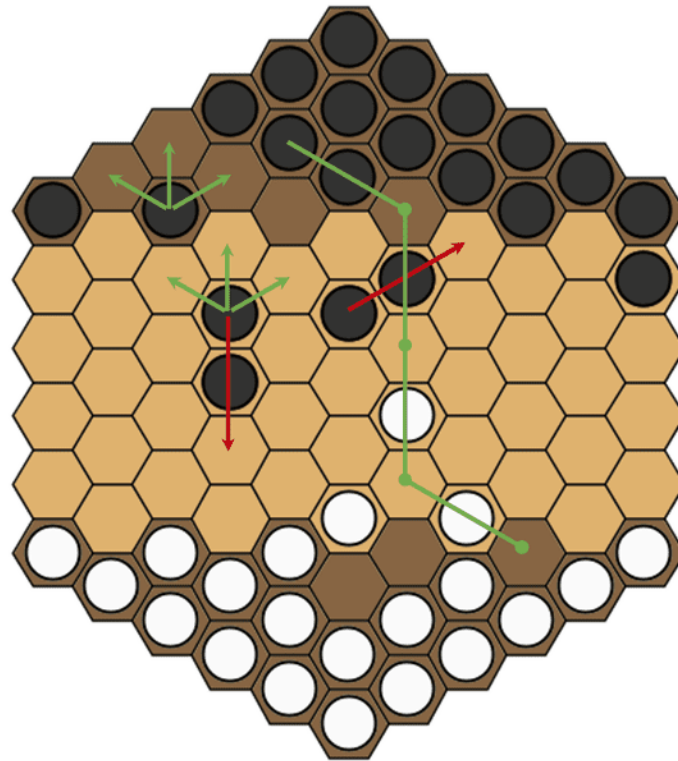

initial setup

On their turn, each player may move two different pieces or move the same piece twice. On the first turn the first player may only move one piece (on this forum, 12* movement pattern). A player may also pass on one or both of their moves. When both players pass their entire turn in a row, the game ends.

Pieces may move by one of two mechanisms - **Falling Back** and **Hopping**.

Any piece may **Fall Back**. To do so, the piece simply moves 1 step away from the opponent (straight back, or back and to the side).

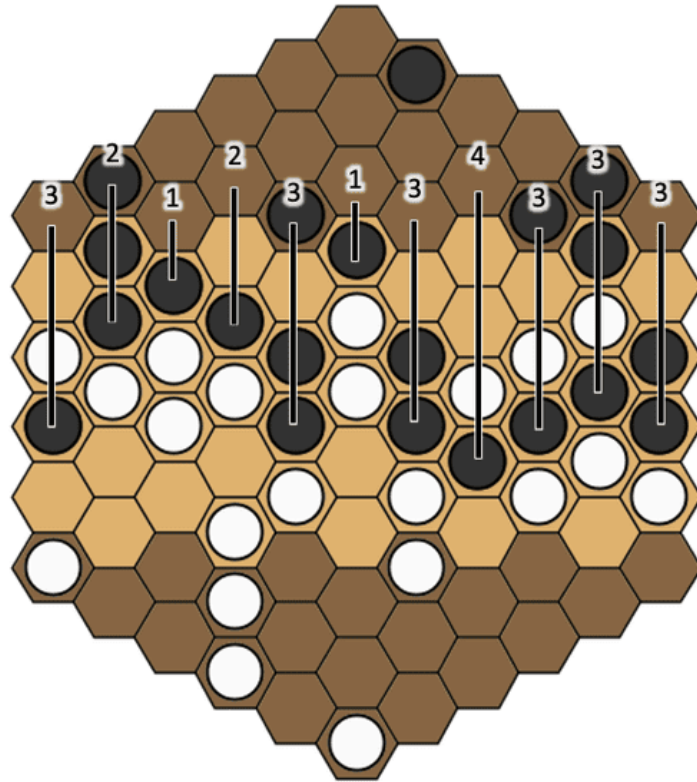

Only pieces that begin their move in the owner's Setup Zone (dark brown area) may begin a **Hop** move. The piece may hop over any neighboring piece (friend or enemy) to the space on the other side. If able, the piece may continue hopping if there are pieces to hop over. Pieces may not hop over more than one piece at a time, and they may not hop over empty gaps (Halma hopping rules). A player may have a piece fall back to the setup zone and then use their second move to hop the same piece forward during the same turn.

Game End: If both players pass their entire turns in a row, the game ends.

In addition to the pass rule, at the beginning of a player's turn, they have no *forward* Hop moves available, they may choose to declare the game over. Only the first Hop in a sequence is considered for the purpose of finding a forward Hop (so a backwards Hop that leads to a forwards Hop doesn't count).

Scoring: After the game ends (by passing or declaration) players calculate their scores to determine the winner. Each player scores their most advanced piece in each column. The piece is worth 1 point for every hex it has moved beyond the player's start zone (see image). If a player has no piece beyond their start zone in a particular column, they score 0 for that column.

In the example game above, White has won with a score of 29 to Black's 28.
