

Gyghex

2026, Максим Мышанский, <https://boardgamegeek.com/thread/3700546/>

The game is played on the following board and setup:

the pieces are shared

A player may only move pieces from the *non-empty* row closest to them (which has available legal moves).

Pieces move by pivoting around an adjacent piece (over empty hexes).

The number of hexes a piece moves is equal to the value (strength) of the hex occupied by the adjacent piece it moves around (it cannot move less than that value).

Chain Movement. If, after moving, a piece ends up adjacent to another piece, it may continue moving by pivoting around that new adjacent piece.

End of Turn Condition. At the end of a turn, the moved piece must either be on a higher row or remain in the same row.

Ko. A player may not move the last piece the opponent moved.
