

Crownsi

2026, Mark S. Ball, <https://boardgamegeek.com/thread/3651841>

The game is played on this board:

initial setup

Rules

- You must move the piece that currently holds the Crown. You have two options, but jumping is mandatory if possible.
- Jumps can be made horizontally, vertically, or diagonally over one piece at a time. If you land and another jump is available, you must continue.
 - If there are multiple jumping options, you must take the path that captures the highest number of pieces.
 - Every piece jumped over is removed from the board and added to your score.
- If no jumps are available, move the Crowned piece one empty space orthogonally or diagonally.

Throw. After completing your move, you must throw the Crown to a different piece still on the board. This piece will be moved by your opponent on their turn.

- You can throw the Crown to any non-adjacent piece in a straight line orthogonally or diagonally from your current position.
- If no pieces are in your line of sight, you may throw the Crown to any other piece on the board that is not directly adjacent to the Crowned Piece.

Goal. As soon as *your opponent* captures seven or more pieces, you win. If your opponent is unable to move, jump, or end their turn with a throw, you win.
