

Scrutiny

2026, Antonio Leonti, <https://boardgamegeek.com/thread/3652470>

Scrutiny is a strategy game where two players race to a target (denoted by the '⌘' symbol).

All pieces have the same movement pattern-- they slide up, down, left, or right until they hit another piece or the edge of the board.

Shared (yellow) pieces can be moved by either player. They have the same movement pattern as the red and blue pieces, but they have the following additional constraints:

- They can only move once (they turn black once moved).
- They can pass through but not stop in the gray center area.
- Black pieces cannot move again.

You are allowed to move any number of touching pieces in a single move. They must be touching "inline" with their direction of travel. This is called a "battery". A battery may be composed of any combination of your own pieces and shared pieces.

Note: The *battery* is similar to the *phalanx* in Epaminondas.
