

Clamber

2025, Corey Clark, <https://boardgamegeek.com/boardgame/479193>

A size 3 hexhex board and an unlimited supply of stackable pieces in two colors

end position

Definitions

- Super-group: a maximal set of stacks in one color that can be reached through a series of steps between stacks of that color
- Subgroup: any such set of stacks where all the stacks are additionally the same height

On your turn either place a singleton (stack of height 1) on the board or make at least one capturing move. There are two ways to capture:

- Capture an adjacent lower enemy stack by capping it with your piece, removing the entire enemy subgroup to which the stack belonged prior to the capping.
- The second way is to capture an equal height stack that is in an adjacent enemy super-group to one of your stacks (once again by capping it with your piece and removing the enemy subgroup to which the stack belonged). When capturing an equal height stack you may compare the newly captured stack, now, to the adjacent enemy super-groups and make an additional capture, reiterating this process as many times as you feel like before concluding your turn.

Forced passing: if you have no available moves on your turn, your turn is automatically skipped over. Passing voluntarily is strictly forbidden

Goal. the objective of Clamber is to leave your opponent without any stacks remaining on the board.
