

Avalancha

2026, Rey Alicea, <https://boardgamegeek.com/boardgame/478691>

*the four black/white piece are randomly placed initially
the 16 stones in the top rows are neutral*

On his turn the player must do three actions:

1. Slide orthogonally or diagonally a friendly stone over N empty squares
2. Slide a neutral piece over exactly N empty squares
3. If that neutral stone came from the two top rows, drop a new neutral on that empty square

After every action, any piece with zero empty squares among its eight neighbors is removed from the board.

A player with no valid moves loses the game.
